SUMMARY

Cloud & DevOps Engineer with a strong foundation in AWS, Microsoft Azure, Linux administration, infrastructure automation, networking, and system monitoring, developed through practical cloud and DevOps implementation projects using Terraform, Docker, Kubernetes, Jenkins, and Ansible. Skilled in cloud provisioning, Infrastructure as Code (IaC), containerization, CI/CD automation, infrastructure monitoring, troubleshooting, and security with a strong interest in building reliable, scalable, and automated cloud infrastructure.

SKILLS

- **Cloud Platforms:** Amazon Web Services (AWS), Microsoft Azure.
- **AWS Services:** EC2, VPC, IAM, S3, Route 53, SNS, Auto Scaling, Application Load Balancer (ALB), CloudTrail, CloudWatch
- **Azure Services:** VMs, VNets, Storage Accounts, Azure Monitor
- **IaC & Automation:** Terraform, Ansible, Bash/Shell scripting, Python
- **Containers & Orchestration:** Docker, Kubernetes
- **CI/CD:** Jenkins, Git, GitHub
- **Monitoring & Observability:** CloudWatch, Prometheus, Grafana
- **Networking & Security:** DNS, TCP/IP, VPN, Load Balancing, Security Groups, IAM policies
- **OS & Databases:** Linux (Ubuntu, Amazon Linux), Windows Server basics, MS SQL Server, MongoDB
- **Soft Skills:** Troubleshooting, Incident Management, Problem Solving, Communication, Team Collaboration

EXPERIENCE

Wipro LTD, Bengaluru – Project Engineer Trainee

Dec 2022 - Apr 2023

- Completed structured training in .NET and backend development concepts.
- Developed academic-level projects including Internet Banking and Movie Ticket Booking systems using C# and MS-SQL.
- Worked on multi-tier architecture, database integration, and gained exposure to software development lifecycle practices.

PROJECTS

Self-directed Cloud & DevOps projects completed to strengthen practical experience in cloud infrastructure, automation, monitoring, Linux administration, and CI/CD practices.

AWS Cloud Monitoring & Alerting System

- Configured CloudWatch Agent on Linux servers to monitor CPU utilization, memory, disk usage and performance metrics.
- Created IAM roles and attached required policies for secure CloudWatch Agent integration and monitoring access.
- Configured CloudWatch alarms and integrated SNS notifications for automated infrastructure alerting and monitoring.
- Followed AWS monitoring and security best practices during alerting and dashboard configuration.

Cloud Infrastructure Provisioning & Monitoring using Terraform, Grafana & Prometheus

- Provisioned AWS infrastructure like EC2, VPC, Security Groups, Route Tables, and Internet Gateway using Terraform.
- Configured virtual networking, access controls, and security policies across cloud resources.
- Implemented Infrastructure as Code (IaC) practices for automated infrastructure deployments.
- Configured Grafana and Prometheus dashboards for infrastructure monitoring and metrics visualization.

CI/CD Pipeline Automation using Jenkins, Docker, Kubernetes & Ansible

- Built CI/CD pipelines using Jenkins, GitHub, and Kubernetes to automate application build and deployment workflows.
- Containerized a full-stack web application using Docker and deployed it across cloud-based Linux environments.
- Automated application deployment and server configuration using Ansible playbooks.
- Configured deployment workflows, Linux environment setup, and basic application monitoring.

EDUCATION

Nagarjuna College of Engineering and Technology, Bengaluru.

2018-2022

B.E Electronics and Communication

CGPA-8.14
